

Appendix 2

Location of Equipment – London

Emergency equipment is usually located in the treatment room.

Staff should familiarise themselves with their equipment on arrival on the ward or community location.

In the Community Teams, the FRx defibrillator is in a wall cabinet close to the reception.

Staff carrying out community visits should request Laerdal masks from their Team Managers.

All staff must know where their equipment is, must know how to summon help and must commence initial management – Basic Life Support until emergency response arrives.
