

JAC EPMA Nursing Guide:

MAC/MAP Reports

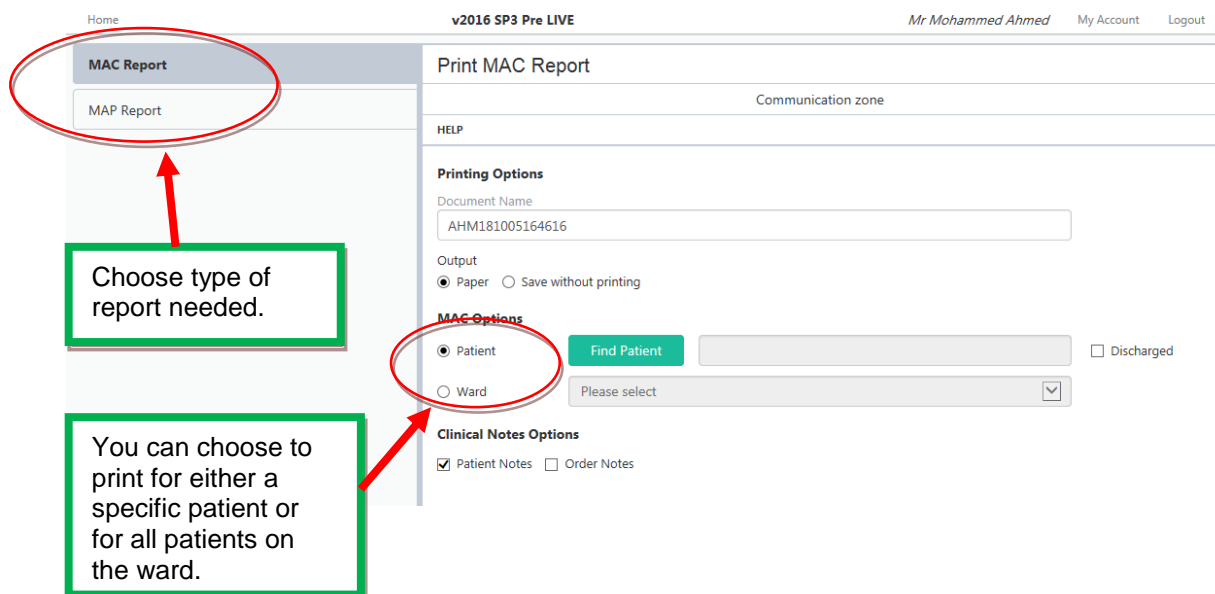

JAC User Guide –Generating medication Charts

Printing Medicines Charts

- Select 'Reporting' tile from the home screen

- The **MAC** report is a chart for the next 7 days which can be printed and used as a paper chart until the system is available.
- The **MAP** report shows all medicines previously administered during this admission. This is especially important for PRN medications so the maximum prescribed dose in 24 hours is not exceeded.
- You must always print both reports as you will be missing vital information if you only have access to one of them.

JAC User Guide – Generating medication Charts

MAP report:

The screenshot displays the JAC Medicines Management application. The main window shows a medication chart for a patient named TEST-Patient2, FORTRA. The chart includes patient details (Hospital No: 11111102, Date of Birth: 10-Jan-1990, Allergies: paracetamol) and a table of medications with their frequencies and start dates. A 'Save As' dialog box is open over the chart, showing the file name 'Pdf14', the save location 'This PC > Desktop', and the file type 'Adobe PDF Files (*.pdf)'. A red circle highlights the 'Save' button in the dialog box, and a red arrow points from this circle to a text box below.

Drug	Route & Frequency/Interval/Rate	19-Oct-2019	20-Oct-2019	21-Oct-2019
